1969

For administrative purposes, the Department of Health, Education, and Welfare divides the States and Territories into nine regional groupings. *The 1968 National Survey of Community Solid Waste Practices* is published as a series of nine volumes, one for each region. The States comprising those regions are shown below:

Region 1 —Connecticut, Maine, Massachusetts, New
(Volume 1) Hampshire, Rhode Island, Vermont

Region 2 —Delaware, New Jersey, New York,
(Volume 2) Pennsylvania

Region 3 —Kentucky, Maryland, North Carolina,
(Volume 3) Virginia, West Virginia, District of
Columbia, Puerto Rico, Virgin Islands

Region 4 —Alabama, Florida, Georgia, Mississippi,
(Volume 4) South Carolina, Tennessee

Region 5 —Illinois, Indiana, Michigan, Ohio,
(Volume 5) Wisconsin

Region 6 —Iowa, Kansas, Minnesota, Missouri,
(Volume 6) Nebraska, North Dakota, South Dakota

Region 7 —Arkansas, Louisiana, New Mexico,
(Volume 7) Oklahoma, Texas

Region 8 —Colorado, Idaho, Montana, Utah,
(Volume 8) Wyoming

Region 9 —Alaska, Arizona, California, Hawaii,
(Volume 9) Nevada, Oregon, Washington, American
Samoa, Guam

foreword

MAINTAINING THE QUALITY of the human environment has become one of the most important challenges to the scientific community. Although water and air pollution have been matters of national concern for more than a decade, the third pollution—resulting from ineffective management of solid wastes—has received national attention only within the past three years. With passage of the Solid Waste Disposal Act in October 1965, Congress recognized the necessity to invest more of our technological and financial resources in this previously forgotten field.

The problems of solid waste management must be adequately defined before they can be attacked. It is essential, therefore, that adequate and reliable data be developed on the location, character, and quantity of solid wastes produced, and that current collection and disposal operations be fully described. The 1968 National Survey of Community Solid Waste Practices is the first attempt to compile and report solid waste information uniformly on a national basis.

Although the Survey was designed by the Bureau of Solid Waste Management, the basic data were collected, for the most part, by the respective State solid waste planning agencies. There is every expectation that the information contained in this publication will prove useful to all levels of government as well as to universities, industries, and other private organizations concerned with improving the science of solid waste management.

— RICHARD D. VAUGHAN, *Director*
Bureau of Solid Waste Management

preface

THE SOLID WASTE DISPOSAL ACT provides for grants of up to \$100,000 to State and Interstate agencies to conduct surveys of solid waste practices and develop solid waste disposal plans. Such surveys are a prerequisite to the development of existing solid waste management programs. The response to this comprehensive planning program was given a high priority. But as only a few States had such programs, few had either the time or the resources to develop and plan the required surveys. States, through the Conference of Solid Waste Management Officials in July 1966, recommended that the Bureau of Solid Waste Management prepare data and guidelines for conducting such surveys. The response to this recommendation was the 1968 National Survey of Solid Waste Practices.

The data listings, reporting forms, and instructions for the Survey were developed in more than five months through the cooperation of representatives of the Bureau of Solid Waste Management, State agencies, and private organizations. This publication provides information on the types of solid waste collected, their disposal methods (manpower, equipment, facilities), and the activities required to carry out collection, transportation, and disposal. In addition to the inventory of existing reduction and disposal programs, information was obtained from individuals who own waste or utilize their own

word

THE QUALITY of the human environment has become one of the most important issues to the scientific community. Water and air pollution have been a major concern for more than a decade, arising from ineffective management. The problem has received national attention in recent years. With passage of the Clean Air Act in October 1965, Congress authorized the investment of more of our technological resources in this previously for-

solid waste management must be developed if they can be attacked. It is essential that adequate and reliable data be obtained on the location, character, and quantity of waste, and that current collection methods be fully described. The 1968 National Community Solid Waste Practices Survey will compile and report solid waste management on a national basis.

The Survey was designed by the Bureau of Solid Waste Management. The basic data were collected by the respective State solid waste management agencies. There is every expectation that the information obtained in this publication will be of use to both government as well as to industry and other private organizations engaged in the science of solid waste management.

ROBERT D. VAUGHAN, *Director
Bureau of Solid Waste Management*

preface

THE SOLID WASTE DISPOSAL ACT of 1965 provides for grants of up to 50 percent of the costs to State and Interstate agencies for conducting surveys of solid waste practices and for developing solid waste disposal plans. Since a thorough knowledge of existing solid waste conditions is a rather conspicuous prerequisite to the development of comprehensive planning programs, the conduct of solid waste surveys was given a high priority by the States. But as only a few States had established solid waste management programs, few had either the background or experience to develop and plan the required surveys. Thus, the States, through the Conference of State Sanitary Engineers in July 1966, recommended that the Bureau of Solid Waste Management prepare a list of essential data and guidelines for conducting the statewide surveys. The response to this request resulted in the formation of the 1968 National Survey of Community Solid Waste Practices.

The data listings, reporting forms, and specifications for the Survey were developed over a period of more than five months through the joint efforts of representatives of the Bureau of Solid Waste Management, State agencies, and private consultants. The Survey provides information on the types and amounts of solid waste collected, their disposition, and the resources (manpower, equipment, facilities, monies, etc.) required to carry out collection, reduction, and disposal activities. In addition to the inventory data, evaluations of existing reduction and disposal facilities are also provided. It must be emphasized, however, that the Survey is community-oriented. In general, little information was obtained from industries that handle their own waste or utilize their own on-site disposal facilities.

ties. The same holds true for the on-site disposal of agricultural wastes. Additionally, no assessments of individual apartment house incinerators and similar types of facilities were made.

To provide maximum flexibility in conducting the Survey and in recording results, three reporting forms were used: one to report on the "community" itself and the other two for disposal sites only. The Community Description Report embraces four broad areas: storage, collection, disposal, and budget or fiscal. The two disposal forms, Land Disposal Report and Facility Investigation Report, focus on three areas: (1) description and evaluation of site, (2) quantitative data, and (3) fiscal data. In addition, the facility form contains a separate section on the design features and operational characteristics of incinerators.

To obtain adequate coverage and reliable data, the Survey was performed as a field investigation. The data were gathered by State personnel via personal interview or by direct observation. Under no circumstance was a form completed on the basis of a mail-out questionnaire. To insure uniformity in the data, the Bureau of Solid Waste Management issued an instruction manual* that discussed the Survey forms, their interpretation and nomenclature in detail. (It is recommended that users of the Survey data be completely familiar with the *Manual of Instructions*.) The Bureau also conducted seminars and workshops with the State personnel to promote additional consistency.

Survey forms completed by the participating States were forwarded to the Bureau of Solid Waste Management for processing in the Bureau's automatic data storage and retrieval system. This system was designed and operated under the direction of Charles R. Hampel,

* Manual of instructions and sample problem for use in conducting the National Survey of Community Solid Waste Practices. [Cincinnati], Solid Wastes Program, July 1967. 65 p

Chief, Computer Services, with programming and documentation being implemented by Charles R. Butler; Albert J. Klee, Chief, Operational Analysis, provided overall supervision and guidance. Upon receipt of the forms, the Survey information was coded in a prescribed manner,* keypunched, and processed through a Honeywell 400 computer. Tabulated computer printouts were returned to the States for verification of data and correction of any coding or keypunching errors.

To date, 38 States, the District of Columbia, and Puerto Rico have received State planning grants and are participating in the National Survey.† Because some of the grants are relatively new, only 30 States and the District of Columbia have contributed data to the Survey thus far. However, three States (Indiana, Iowa, and Kansas) were partially surveyed by personnel of the Bureau of Solid Waste Management, with the cooperation of the appropriate State agency, and these data are also included in this report.

The data listed in this publication represent Survey information that had been processed and incorporated into the system as of July 1, 1968. Information is provided on more than 6,300 communities representing over 46 percent (92.7 billion persons) of the total population of the United States. In addition to these communities, information is also included on more than 6,000 land disposal sites and 450 facilities. Thus, this inventory provides more information on solid waste practices in more communities than has been reported at any time in the past. Since many States have reported only partial results and others are only beginning their surveys, additional data will continue
